

# EPIC

CARD GAME

**RULE BOOK**

*The first war of the gods tore the world apart. Each god continually remaking reality was more than the universe could withstand... The great nothingness returned, leaving the gods to bicker in the void.*

*Eventually, a compromise was reached. The gods joined forces to create the universe anew, but this time there were rules that even they must obey.*

*No longer could gods battle directly, tugging against one another on the fabric of reality. Now their wars are fought in the mortal world with mighty champions and devastating events.*

## **Getting Started**

This set comes with 120 cards (with the Epic card back), 8 double-sided tokens, and these rules. The cards are used to make decks. If a card instructs you to put a token champion into play, use the included tokens. If you run out, feel free to use scraps of paper or the like to represent more token champions.

To start a basic two-player game, shuffle the game cards and deal 30 to each player. These are their decks. Each player should have a place next to

their deck for their discard pile. Cards are placed in the discard pile face up, and all players may look through any discard pile at any time.

Each player starts with 30 health. When you take any amount of damage, you lose that much health. You can track your health with dice, pen and paper, or however you want.

Randomly determine who will go first, then each player draws a five-card starting hand from their deck. Starting with the player going first, each player may “mulligan.”

## **Mulligan rule**

After drawing their opening hands, each player may choose any number of cards to put on the bottom of their deck, then draw that many cards, then lose that much health.

## **Winning and Losing**

If your health is 0 or less, you lose the game. If you eliminate all of your opponents, you win the game. You also win the game if you would draw a card but have no cards left in your deck.

# Events

Events represent the will of the gods impacting the mortal world. You may play events during any turn. When you play an event, do what it says on the card, and then put it into your discard pile.

## Cost

Each turn, each player gets one gold. A card's cost is in its upper right-hand corner. Some cards cost a gold (1) to play, while others are free (0).

## Alignment

There are four alignments in Epic, each with its own color.

## Rules Text

What the card does.

## Card Type

There are two types of cards in Epic: Events and Champions.

# Champions

Champions are heroes or monsters that stay in play and fight for you. You may only play champions on your turn.

## Class

The species and/or profession of the card. Some cards reference another card's class.

## Offense

The amount of damage a champion deals in battle.

## Defense

The amount of damage that must be dealt to a champion in a single turn to break it. (Broken champions are placed in its owner's discard pile.)

## Keywords

The special abilities that champions have. Find a complete list on page 15.

## Playing a card

To play a card, pay any costs (if the card costs a gold, you lose your gold for the turn) and put the card face up on the table in front of you. No one can respond or otherwise interfere with you playing your card.

If it is an event card, do everything the card says in the order it says it, then put it in your discard pile.

If it is a champion card, it stays in play. Unless something happens to it, your champion will stay in play for the rest of the game, and you can use it to attack, block, and use its powers and abilities.

*Note: A champion is “deploying” until you start your turn with it in play. A deploying champion can’t attack or use  powers, but it can block.*

## Powers and Abilities

### Powers

Some cards have powers you can use. The cost to use the power appears to the left of the colon, and what the power does appears to the right. For example:

 : Deal 2 damage to a target.

### Abilities

Some cards have abilities. You don’t use abilities; they just happen. Some abilities are continuous, and some are triggered.

### Continuous abilities

Continuous abilities are applied while the card is in play. For example:

**Your human champions get +1 .**

### Triggered abilities

Triggered abilities are produced when a condition is met. Triggered abilities will always have an arrow icon (). The condition that triggers the ability is to the left of the arrow, and what the ability does is to the right. For example:

**When this card is broken  Draw a card.**

When a triggered ability’s condition is met, the effect will happen the next time any player would be allowed to play cards. All triggered abilities must be dealt with before any additional cards can be played.

*Note: Occasionally multiple triggered abilities will happen at once. In this case, the player whose turn it is deals with all their triggered abilities first, in any order they wish, then the player to their left deals does the same, etc.*

## Champion Positions

There are three positions a champion can be in: prepared, flipped, or expended.

### **Prepared** (vertically-aligned)

This champion is ready to attack, block, or use powers with an expend  cost.

### **Expended** (horizontally-aligned)

Attacking expends a champion. Once expended, a champion may not attack, block, or use powers with an expend cost.

### **Flipped** (rotated 180 degrees)

Blocking an attack flips a champion. Flipped champions can't block again this turn, but may use powers with an expend cost.

## The Turn

**Step 1:** Both players lose the gold they had (if any) and gain 1 gold ().

**Step 2:** You draw a card (not on the first player's first turn) and prepare your champions. Then, "At the start of turn" triggers happen.

**Step 3:** Play cards, use powers, and/or attack as much as you'd like. If you attack, proceed to the Battle Phase.

**Step 4:** Announce that you want to end your turn.

### **The other player may play events and powers.**

If they do, go back to step 3 afterwards. If they don't, proceed to the End Phase.

*Note: Generally, you are the only person who can play cards or use powers on your turn. When you do, they just happen – there is no "responding" in Epic.*

## Battle Phase

When you attack, it starts a “battle.” Each battle phase is split up into three steps: choose attackers, choose blockers, and deal damage.

### Choose attackers step

A. The attacking player chooses which champion or group of champions will attack, and expends them.

Only prepared champions may attack.

Champions you played this turn are deploying and cannot yet attack.

B. The attacking player may play any number of powers and events, then pass.

C. **The defender may play any number of powers and events, then pass.** If the defender played anything, go back to step B afterwards.

### Choose blockers step

D. The defending player chooses which champion or group of champions is blocking (if any). Those champions are flipped (rotated 180 degrees).

Only prepared champions may block.

If the attack is blocked, they remain blocked even if the blocker(s) leave play.

If a champion blocks any attacker, the entire attacking group is blocked (even if some champions in the attacking group would otherwise be unblockable).

E. The attacking player may play any number of powers and events, then pass.

F. **The defender may play any number of powers and events, then pass.** If the defender played anything, go back to step E afterwards.

*Note: Attackers are declared in step A and blockers are declared in step D. Champions entering play are not automatically declared as attackers or blockers.*

### Damage step

No one may play cards or powers during the damage step.

Attacking and blocking champions simultaneously deal damage equal to their offense, and any

champions broken by this damage are put in their owner's discard pile.

Attacking champions deal damage to blocking champions (or to the defending player if the attack wasn't blocked). Blocking champions deal damage to attacking champions. The player who controls a champion decides where it deals its damage. They may split damage up however they like.

Then, deal with any triggered abilities that were produced during the damage step. Finally, "At the end of combat" triggers happen.

The attacking player resumes step 3 of their turn. They may attack again.

## End Phase

No one may play cards or powers during the end phase.

Deal with any "at end of turn" triggered abilities.

All damage is removed from champions and all flipped champions are prepared.

*Note: The only times you are allowed to play events*

*and powers on your opponent's turn are when they attack you, after you've blocked, and when they try to end their turn.*

## Keywords and Terms

**Alignment** (color –    )

There are four alignments in Epic, each with its own color. You can play cards of any mix of alignments in your deck. There is no restriction to what color cards you play, but sometimes you get bonuses for matching your colors. (See Ally Abilities and Loyalty.)

### Airborne

Airborne champions may only be blocked by other airborne champions.

**Ally Abilities** ( →,  →,  →,  →)

These abilities trigger when you play a **1** card of the listed alignment. (Free cards do not trigger ally abilities.)

### Ambush

You may play a champion with ambush any time you are allowed play an event, even during an

opponent's turn. Remember, your champions are deploying (see below) until you start your turn with them in play.

### **Banish**

A banished card is put on the bottom of its owner's deck. If a player has multiple cards banished simultaneously, shuffle them first.

### **Blitz**

Blitz champions may attack and use  powers while deploying.

### **Break**

A broken card is put into its owner's discard pile. A champion is broken if it takes damage equal to or greater than its  in a single turn.

### **Breakthrough**

If you assign damage from breakthrough champions to each blocker equal to their , any remaining damage from breakthrough champions may be assigned to the defending player. (Damage from events and other champions does not help.)

### **Deploying**

Your champions are deploying until you start your

turn with them in play. A deploying champion can't attack or use  powers, but it can block.

### **Expend ( )**

To turn a card sideways.

### **Loyalty 2**

When a champion with loyalty 2 enters play, you may reveal two cards of that champion's alignment in your hand. If you do, you gain the effect listed after the arrow ().

### **Tribute**

When a champion with tribute enters play, you gain the effect listed after the arrow ().

### **Recall**

A recalled card returns from your discard pile to your hand.

### **Recycle**

To recycle, you may banish two cards in your discard pile. If you do, draw a card.

### **Righteous**

When a righteous champion deals damage  You gain that much health.

## Token Champions

Token champions are treated just like normal champions, except when a token champion would leave play, return it to your pile of spare tokens instead. (Tokens can't go to someone's hand, deck, or discard pile.)

## Unblockable

Unblockable champions may not be blocked.

## Unbanishable

While the champion is in play, it may not be banished.

## Untargetable

While the champion is in play, it may not be the "target" of an event, power, or ability.

*Note: Untargetable champions can be chosen to receive damage in battle, and are effected by events that don't target (like Apocalypse).*

## Unbreakable

The champion will not be put into the discard pile from a break effect or from damage. (If you must break an unbreakable champion as part of a power's cost, you can't play that power.)

# THE MANY EPIC FORMATS

## Limited

For Limited formats, each player creates a 30-card deck from a limited pool of cards.

### **Sealed** (2-4 players, 5-8 players with two sets)

Each player is randomly dealt 30 cards. Shuffle and play! If you like, deal out more cards and have players choose the 30 best cards with which to build a deck.

### **Pack Draft** (3-4 players, 5-8 players with two sets)

Deal out three 10-card "packs" to each player. Keep these separated. To start, each player looks through their first pack, chooses one card, puts it face down in a pile, and passes the rest of the cards to the player on their left. Each player takes the pack that was passed to them, and chooses another card for their pile. Keep doing this until each player's first pack is gone. Now do the same for the second pack, but instead you pass to the player on the right.

Draft the third pack by passing to the left again. You end up with a 30-card deck. Shuffle and play!

### **Open Draft (2 players.)**

Take a shuffled Epic card collection of at least 60 cards. Decide which player goes first (“Player A”), and reveal four cards from the top of the stack. Player A chooses a card. Player B chooses two cards, then Player A takes the last card. Repeat this process, alternating which player gets first pick, until all of the cards are drafted. Each player builds a 30-card deck.

### **Epic Cube Draft (8 players, 3 sets required.)**

Take three Epic card sets, and remove two copies of each card with a  in the lower-right corner, leaving one copy of  cards, and three copies of each  card. Randomly deal out three 12-card “packs” to each player. Players then Pack Draft (see above) until each has a pool of 36 cards with which to build a minimum 30 card deck.

## **Constructed**

For Constructed formats, players’ decks are built ahead of time.

### **Preconstructed (2-4 players per set)**

Each Epic set contains four Preconstructed decks.

Simply separate all the cards by color, and you have four balanced decks!

### **Full Constructed (Any number of players)**

Each player builds a deck from their own Epic card collection. Decks must contain at least 60 cards, with no more than three copies of each card. Also, for each  card of an alignment, the deck must contain two copies of a  card of the same alignment.

## **Multiplayer**

There are some rules which apply to all multiplayer games:

Determine which player goes first, and play proceeds clockwise.

The player that goes first draws a card at the start of their turn (unlike in a two-player game).

When a player is eliminated from the game, all cards that started in their deck also leave the game.

At the start of your turn, you lose all gold, then gain 1 gold. After your turn ends, you lose all gold, then gain 1 gold. Remember: You won’t get

another gold until your turn starts again, no matter how many other players are in the game.

### **Free-for-all**

Players face off against each other sitting around a table. In Free-for-all, there are no restrictions on which player you may attack, and your events and champion powers may target any player. The winner is the last player remaining.

### **Hunter – First Blood**

Same as Free-for-all, except that you may only attack the player to your left and you may only play events targeting the players to your left and right. Your cards can only affect you and the players to your left and right. The game ends when a player is eliminated; the player to their right wins (no matter who did the eliminating – so play carefully!)

### **Hunter – Last One Standing**

Same as Hunter – First Blood, except when a player is eliminated the game continues. The person to the eliminated player's right gains 5 health, and draws a card.

## **Team Multiplayer**

For Team Multiplayer games, each team is considered to be a single entity. Play until one team remains.

### **Hydra (equal number of players on each team)**

A team of players shares the same turn. Each player has their own decks, discard piles, champions, and gold, but they share a health total that begins at 30 times the number of players on the team. Attacks are directed at an opposing team. A player's champions may attack and block in groups with teammates' champions.

### **...and even more.**

There are so many other ways to play Epic! We encourage you to come up with your own.
